Specimen Requirements

Collection Centre: _____ Collected by: _____ (please print)

Date (YYYY/MM/DD): ____/____/____ Time: _____ Blood (3-10 cc - EDTA vacutainer - lavender or pink)
Note: The requisition and specimen must carry the same two unique patient identifiers or the sample may be rejected.

Family History

Family Mutation: _____ Name: _____ DOB: ____/____/____

Principal Diagnosis, Therapy and/or Clinical History

Class Categories (please check off all pertaining categories)

Class I (is recommended)

- Any patient in whom a cardiologist has established a strong clinical index of suspicion for LQTS based on examination of the patient's clinical history, family history, and expressed electrocardiographic (resting 12-lead ECGs and/or provocative stress testing with exercise) phenotype.
- Any asymptomatic patient with QT prolongation in the absence of other clinical conditions that might prolong the QT interval (such as electrolyte abnormalities, hypertrophy, bundle branch block, etc., i.e., otherwise idiopathic) on serial 12-lead ECGs defined as QTc >480 ms (prepuberty) or >500 ms (adults).
- Mutation-specific genetic testing for family members and other appropriate relatives subsequently following the identification of the LQTS-causative mutation in an index case.
- Mutation-specific genetic testing for family members and appropriate relatives following the identification of the BrS-causative mutation in an index case

Class IIb (may be considered)

- Any asymptomatic patient with otherwise idiopathic QTc values >460 ms (prepuberty) or >480 ms (adults) on serial 12-lead ECGs.
- Any patient in whom a cardiologist has established a clinical index of suspicion for BrS based on examination of the patient's clinical history, family history, and expressed electrocardiographic (resting 12-lead ECGs and/or provocative drug challenge testing) phenotype.
